

## Lacey City Council Worksession Agenda

Refer to the bottom of the agenda for meeting information.

---

Tuesday, March 10, 2026

6:00 PM

Council Chambers and Online

---

**1. Call to Order**

**2. Roll Call**

**3. Land Acknowledgement**

We, the City of Lacey, are on the ancestral land of the Tribal People of the Treaty of Medicine Creek, including the Nisqually Indian Tribe and Squaxin Island Tribe. We acknowledge and remember those Tribal People not recognized today who were absorbed or relocated into other tribes for survival. We recognize the ancestors and their descendants who are still here. We recognize and respect the Tribal People of the Treaty of Medicine Creek as the traditional stewards of this land since time immemorial and their role today in taking care of these lands in perpetuity. We recognize and have the responsibility to call attention to the histories of dispossession, forced removal, and abridged treaty rights that allowed our nation, state, and city to develop as they have today. We recommend that community members read the Medicine Creek Treaty of 1854.

**4. Approval of the Agenda**

**5. Public Comment**

Refer to the bottom of the agenda for instructions on how to provide public comment.

**6. Agenda Items**

**A. 2025 Carryover Budget Amendment Briefing**

Chelsea Knight, Acting Financial Services Manager

**B. Community Development Block Grant (CDBG) Project Recommendations**

Michelle Chavez, Human Services Coordinator

**C. 2025 State of the Streets Report**

Jamie Conner, Transportation Engineering Technician III

**D. Transportation Benefit District (TBD) Briefing**

Aubrey Collier, City Engineer

**E. Council Reports**

City Council

**7. Adjourn**

---

## Meeting Information:

### Attendance (Remote or In-Person)

The public may attend the meeting in-person, or you may view or listen to the meeting using one of the following platforms:

In-Person: Council Chambers at Lacey City Hall  
420 College Street SE, Lacey, WA 98503

Zoom: [https://us02web.zoom.us/webinar/register/WN\\_AJQaMdI9QD-Flk6OD\\_qanQ](https://us02web.zoom.us/webinar/register/WN_AJQaMdI9QD-Flk6OD_qanQ)

Website: <https://cityoflacey.org/government/public-meetings/>

Facebook: <https://www.facebook.com/cityoflacey>

YouTube: <https://www.youtube.com/watch?v=AdI9MgFICD8>

Phone: (888) 788-0099 or (877) 853-5247 (Webinar ID 854 5787 5556)

### Verbal Public Comment

Each speaker is limited to three minutes. Comments are welcome on matters connected to City business or specific agenda items.

Prior to starting your comments, please provide your:

- a. Name
- b. City of residence or connection to the City
- c. Topic or subject matter of your comments

Those wishing to provide verbal public comment may do so in-person or by Zoom:

In-Person: Use the sign-up sheet located in the Council Chambers.

Zoom: Preregister using the following Zoom link no later than two hours prior to the meeting:  
[https://us02web.zoom.us/webinar/register/WN\\_AJQaMdI9QD-Flk6OD\\_qanQ](https://us02web.zoom.us/webinar/register/WN_AJQaMdI9QD-Flk6OD_qanQ)

Instructions and access details will be provided once registration is complete.

### Written Public Comment

Public comments may also be submitted by email to [PublicComment@cityoflacey.org](mailto:PublicComment@cityoflacey.org). The commenting period will close two hours before the meeting time. Written comments will be provided to the City Council electronically prior to the meeting. Comments will not be addressed during the Council meeting; however, comments received will be added to the official record.

## STAFF REPORT

Council Worksession

March 10, 2026

**Subject:** 2025 Carryover Budget Amendment  
**To:** Lacey City Council  
**Prepared by:** Chelsea Knight, Acting Financial Services Manager  
**Department Director:** Troy Woo, Finance Director  
**Reviewed By:** Troy Woo, Finance Director  
**Final Review:** Rick Walk, City Manager

TW  
RW

**Purpose:** Briefing

**Recommendation:** Review only.

**Brief:** It is common for the City to have outstanding commitments and budget appropriations for goods and services that were properly authorized, budgeted, and encumbered but not fully expended prior to the fiscal year-end. The carryover budget amendment allows for the movement of those budgeted dollars from one year to the next with specific requirements.

### Alternatives:

1. No change: Continue as is.
2. Some other option not contemplated in the above.

### Fiscal Impact:

Budgeted Item: Amendment required

Amount: TBD

---

### Attachments:

### Policy or Legal Alignment:

1. RCW 35A.33.120

### Background:

At fiscal year-end, it is normal for the City to have outstanding commitments and budget appropriations for goods and services that were properly authorized, budgeted, and encumbered but not fully expended prior to year-end. These commitments commonly relate to capital projects, capital equipment purchases, and other Council-authorized expenditures that overlap multiple budget years.

City staff initiated a carryover amendment process back in 2011 to address the budget between fiscal years. The carryover amendment takes place earlier in the year than the annual budget amendment process.

This carryover process relieves concerns that authorized budgets will be exceeded when large carryover projects do not have the proper appropriations until late into the year if the City waited to complete the action with the September annual budget amendment.

The encumbrance and capital carryover requests are restricted as follows:

- Limited to formally adopted, outstanding obligations that were properly authorized and encumbered prior to fiscal year-end.
- Capital projects and purchases were previously authorized by City Council through the adopted budget.
- Budget carryovers must remain within the same fund as the original appropriation.
- Prohibits budget carryovers that would result in deficit spending or a negative ending fund balance.

Budget carryovers do not authorize new spending and may only be used to satisfy the original obligation for which the budget appropriation was established. The carryover budget amendment requires City Council approval by ordinance.

City staff plans to share significant carryover requests at the March 10, 2026 Worksession and present the ordinance for City Council consideration at the March 17, 2026 City Council meeting.

## STAFF REPORT

Council Worksession  
March 10, 2026

**Subject:** CDBG Project Recommendations  
**To:** Lacey City Council  
**Prepared by:** Michelle Chavez  
**Department Director:** Shannon Kelley-Fong, Assistant City Manager  
**Reviewed By:**  
**Final Review:** Rick Walk, City Manager

*mjc*  
*SKF*  
*RW*

**Purpose:** Briefing

**Recommendation:** Authorize moving forward with Huntamer Park Accessibility / Sidewalk Improvements, Lacey Senior Center Expansion Project and 10% for Administration of the CDBG Program

**Brief:** The Human Services Commission recommended the following CDBG funding recommendation for Program Year 2025 (PY25)

- \$313,554 in Capital Project Funding for the Lacey Senior Center Expansion Project: Parking Lot and Accessibility Improvements; This project may extend to multiple CDBG funding years
- Contingency Project: Huntamer Park Accessibility / Sidewalk Improvements; and
- \$34,839 (10%) for Administration of the CDBG Program

Based on project planning, City staff has determined that Huntamer Park Accessibility / Sidewalk Improvement Project is likely more immediately viable.

### Alternatives:

1. No motion is recommended at this time
2. Some other option not considered

### Prior Review:

Council Regular Meeting – 8/5/2025 [Link](#)  
Human Services Commission – 11/6/2025 [Link](#)  
Human Services Commission – 1/8/2026 [Link](#)

**Advisory Board Recommendation(s):**

Human Services Commission - Recommended the following CDBG funding for Program Year 2025 (PY25)

- \$313,554 in Capital Project Funding for the Lacey Senior Center Expansion Project: Parking Lot and Accessibility Improvements; This project may extend to multiple CDBG funding years.
- Contingency Project: Huntamer Park Accessibility / Sidewalk Improvements; and
- \$34,839 for Administration of the CDBG Program

**Fiscal Impact:**

Budgeted Item: Yes

Amount: \$ 348,393

Project Code:

Funding Source: 120-0000-333.14-20

---

**Attachments:**

1. Eligible Activities Summary
2. 2025 CDBG Income Eligibility Chart
3. Huntamer Park Sidewalk Replacement Map and Photos

**Policy or Legal Alignment:**

1. [2025-2027 Approved CDBG Consolidated Plan](#)
2. [2025 Approved CDBG Annual Action Plan](#)

**Background:** The Community Development Block Grant (CDBG) Program provides annual grants on a formula basis to states, cities, and counties to develop viable urban communities by providing decent housing and a suitable living environment, and by expanding economic opportunities, principally for low- and moderate-income persons.

CDBG funded programs or projects must fall under one of the three national objectives:

1. Benefit low- and moderate-income persons
2. Prevention or elimination of slums or blight
3. Address community development needs having a particular urgency because existing conditions pose a serious and immediate threat to the health or welfare of the community for which other funding is not available.

General information on the City of Lacey's (City) Community Development Block Grant Program (CDBG) can be accessed here: [Community Development Block Grant Program - City of Lacey](#)

The City Council approved the 2025-2027 CDBG Consolidated Plan and 2025 Annual Action

Plan, which recommends allocating CDBG funds for City capital projects in the first few years, e.g., ADA improvements, sidewalks, etc. This approach complements existing Human Service Grant Program (HSGP) funds, aligns with administrative resource limitations, and is most flexible if federal requirements change. The approved Program Year (PY) 2025 runs from September 1, 2025, to August 31, 2026

### **Project #1**

This project would expand the existing parking lot at the Virgil S. Clarkson Senior Center (Senior Center) and improve ADA accessibility.

The expansion is necessary to accommodate increased use and attendance at the Senior Center, improve accessibility for older adults, and enhance overall safety during peak hours and special events. The existing lot is often at capacity during regular programming, forcing older adults to park a considerable distance away or to forgo attendance. The expanded parking lot will include approximately 50 additional spaces and improve ADA-accessible parking. The preliminary estimated cost of the project is **\$2,000,000**. This includes environmental review, engineering, demolition, construction, and contingencies. As noted above, the City may leverage allocations from multiple CDBG funding years to address the fiscal needs required to complete this project. For example, over three years, the City could obligate \$313,554 for a total of \$940,662 for this project.

The City has used CDBG funds through the Washington State competitive CDBG Program for both the construction of the Senior Center in 2000 and the Senior Center Expansion Project in 2011.

The City will potentially be advocating for additional funding for this project as part of the [2026 Federal Legislative agenda](#).

### **Project #2**

City staff recommends allocating up to \$313,554 for the Huntamer Park sidewalk replacement project. There are two parcels that form Huntamer Park. The first phase of Huntamer park was developed on the north parcel in 1995, and included the band shelter, benches and walking paths. The paths within north have of Huntamer Park are now 30 years old and in poor condition with several locations where the concrete has lifted or settled creating cracks and/or ledges that create potential trip hazards. See attachment 3 for a map and photos of the walkways in poor condition. The walkways in the 2<sup>nd</sup> phase of Huntamer park or south parcel are still in good condition and do not need repairs replacement at this time.

The estimated cost to replace the concrete walkways is \$280,000. Based on project planning, City staff has determined that this project is the most immediately viable and recommends moving ahead with this project.

The sidewalk replacement project would be a standalone project.

For decades, the City has actively engaged in planning and public projects to transform the Midtown District into a vibrant, community-centered urban core. The “heart” of this area, Huntamer Park, a 1.5-acre civic space, desperately needs updates to meet the growing community's needs. The last significant improvements at Huntamer Park occurred in 2005. Since then, the surrounding Midtown District has grown significantly with new mixed-use and residential (re)developments. This project would strengthen civic engagement, improve equity by increasing park access and amenities in Community Development Block Grant-qualified census tracts, increase environmental resiliency, improve public health and wellness, and expand economic growth and development. The CDBG dollars would be used to improve sidewalks and accessibility within the park and attendance to programmed activities for all community members.

### **Administration**

City staff also recommends allocating 10% of CDBG funds to project administration (\$34,893), which is half of the total amount eligible for this purpose (20% max). This reduces impact to the City's general fund and partially supports staff CDBG resources, including planning for future CDBG allocations and new 5-year Con Plans, AAPs, and CAPERS; creating program guides and monitoring handbooks; potential future sub-recipient monitoring; submitting financial reports; completing environmental reviews for programs and projects; and continuing program improvements and reporting on outcomes.

In alignment with the City Council approved the 2025-2027 CDBG Consolidated Plan and 2025 Annual Action Plan, which recommends allocating CDBG funds for City capital projects in the first few years, City staff recommends prioritizing projects, like those identified above, over to help establish the City's CDBG program while minimizing the staff resources required to administer program funding in the first few years. Implementing a competitive selection process for these dollars would significantly increase the staffing resources needed. In addition, only a limited portion of the funding (up to 15%) may be allocated to public service programs, with the remaining funds required to be used for capital projects. Both funding categories would be resource intensive to administer due to federal compliance requirements.

CDBG Program Year 25 (PY25) funds must be reported on via the Consolidated Annual Performance and Evaluation Report (CAPER) within 90 days of the PY25 end date. The U.S. Treasury Department recaptures CDBG funds if they are not spent within 8 years. The absolute last date for expenditures on PY25 projects is August 31, 2033.

**Table 1. CDBG Eligible Activities by General Categories**

| General Categories                                        | Eligible Activities                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

## STAFF REPORT

Council Worksession  
March 10, 2026

**Subject:** 2025 State of the Streets Report  
**To:** Lacey City Council  
**Prepared by:** Jamie Conner  
**Department Director:** Scott Egger, Public Works Director *SE*  
**Reviewed By:** Not Applicable  
**Final Review:** Rick Walk, City Manager *RW*

**Purpose:** Informational

**Recommendation:** Review only.

**Brief:** City staff evaluates the pavement conditions of the City's streets biennially. Each segment of roadway is visually checked for defects and a rating score from 0 to 100 is assigned based on the type, severity, and extent of the defects found present.

### Alternatives:

1. No change: Continue as is.

### Background:

Lacey's pavement condition inspection program and resulting State of the Streets Report was a requirement of RCW 46.68.113. This RCW required cities and towns to report pavement preservation ratings to the Washington State Department of Transportation. The intent of this law was to ensure that cities produced the pavement condition information that is necessary to engage in best management practices for pavement asset management. RCW 46.68.113 was repealed in 2019. However, Lacey has continued to perform pavement condition inspections as the data from the inspections allows us to track degradation of our pavements, predict future degradation trends based on the cost investment in our pavement management program, and prioritize our pavement preservation projects.

The current (2025) data indicates that 96.8% of Lacey's roads are in very good or good condition, 2.9% are in fair condition, and 0.3% are in poor condition. The overall score for the road network is 84.6. This is a slight increase from an overall score of 84.4 in the 2023 State of the Streets Report.

On the Cover: Yelm Highway Rehabilitation Project

## *PURPOSE / BACKGROUND*

Every other year the City of Lacey collects pavement condition data for its entire roadway network. Here's a summary of Lacey's streets:

- 36.1 centerline miles of arterial streets,
- 24.4 centerline miles of collector streets, and
- 124.4 centerline miles of residential (local) streets, for a total of
- 184.9 centerline miles of roadway within City limits.

All public roads are visually inspected for pavement surface defects. These defects are documented and tallied in the pavement management database. The purpose of this report is to put the raw data in a form that allows the City to determine the current status of these streets on a network level, as well as make intelligent pavement-related repair and funding decisions.

Having a pavement management program in place provides a valuable opportunity to evaluate pavement condition trends. By studying these trends we can estimate and propose future budgetary and maintenance requirements, prioritize projects to maximize cost-effectiveness, and evaluate past performance. This report includes several "what-if" scenarios generated by the pavement management software, which analyze how varying budget amounts will impact the City's roads over a period of time.

## ROADWAY NETWORK ADDITIONS

### Annexations

The City of Lacey passed Ordinance 1658, 1660, and 1672 which added roadway to the existing network in 2023 and 2024 (See Figure 1-4 on pages 4-7). 3.6 centerline miles of roadway in total were annexed with these ordinances. See the chart below for a detailed breakdown of quantities and PCI values for the added roadways. Refer to Page 9 for more information regarding PCI scores.

|                 | Neighborhood/Road Description | Centerline Miles | Lane Miles | Sections Added/Modified | PCI (weighted by area) |

### ***Phase I (Field Data Collection)***

---

Every other year all paved roads within City limits are visually inspected for various signs of defects and aging (see pages 105-111). These roads are divided into smaller, more manageable sections for the purpose of inspection. Sections are typically from intersection to intersection and approximately 1000-1500 feet long as easily identifiable intersections allow. Currently the roadway network is divided up into 1170 field inspection units. As each section is examined, all pavement defects, along with their measurements and severities, are documented.

### ***Phase II (Data Analysis & Scoring)***

---

Since 2005 Lacey has been using a software program called *StreetSaver*, which was developed by the Metropolitan Transportation Commission (MTC) in the San Francisco Bay area and is specifically targeted for use by local municipalities. As data is gathered for each section, any defects noted are entered into the *StreetSaver* program, which deducts points from the section based on the defect type, severity, and size. That value is then adjusted to account for the number of different defects present within that section. This adjusted score is the pavement condition index (PCI). PCI scores range from 0 to 100; a score of 100 would denote a perfect, new section of roadway, and values getting close to 0 would represent a completely failed section.

After calculating the PCI scores for all road sections, the software establishes the extent of repair required and estimates repair costs. *StreetSaver* also calculates projected PCI scores based on different budgeting scenarios. Each year's rating and maintenance information is stored in a database, giving us a more complete record of our network's condition, and keeping track of the extent and timing of road improvements.

### ***Phase III (Project & Treatment Selections)***

---

The output from the data analysis includes a prioritized rating of the roadway segments. The list allows the City to develop a strategy for project selection depending upon the budgeting resources available. Another factor is the optimal timing for a given road treatment, which will ideally provide the greatest improvement in benefit for the lowest cost ("most bang for the buck"), thus making the best use of limited funds. A properly maintained pavement management system will aid in the challenge of maintaining the desired level of service on "good" roads while repairing the "poor" ones.

## ***Pavement Condition Index (PCI) Scores***

---

The condition categories listed below are ranges in the PCI scale that compare similar sections of pavement and make generalized assumptions about their condition.

➤ **“VERY GOOD”** (PCI Scores of 85 to 100)

These streets may be relatively new. They have few, if any defects, and what defects they do have are likely cosmetic. Routine maintenance, such as crack sealing or a surface seal, may be enough to provide a smooth ride for many years to come.

➤ **“GOOD”** (PCI Scores of 60 to 84)

These are streets that are beginning to show their age, due to climate and traffic. Common defects include various forms of cracking and raveling. The defects are generally not serious in nature, but could indicate a need for additional maintenance or localized treatment, such as patching. Their base is still intact and can provide several more years of service.

➤ **“FAIR”** (PCI Scores 40 of to 59)

Defects, such as alligator cracking and depressions, have become more prevalent and more severe. Pavement edges may start to ravel away. These roads are functional, but require rehabilitation if they are to remain an asset in the future. Some structural deficiencies and surface roughness are evident.

➤ **“POOR”** (PCI Scores of 0 to 39)

In this category, the pavement is overshadowed by large areas of cracking and depressions. The surfaces are uneven and may be prone to rutting. Failures in both the pavement and subgrade are easy to identify. These sections are near the end of their services lives and usually require a complete road reconstruction.

## ***Remaining Service Life (RSL)***

---

Some of the essential functions of pavement management are to (1) keep track of pavement condition using ways to measure performance and (2) forecast future pavement performance in order to plan ahead for maintenance and rehabilitation. One of the main indicators for the above is assessing the remaining service life (RSL) of a pavement.

Pavement RSL is the estimated number of years that a pavement section adequately performs to a desired level of service, after which time the pavement is providing substandard service quality. This value is calculated using the distress data and the pavement's rate of deterioration.

RSL is a measure of the amount of pavement service life, not pavement life. Therefore, it's possible for a road section to have an RSL value of zero, which means that it has dropped below the threshold of the desired level of service.

## ***Functional Classifications***

---

Roadways are grouped into functional classes based on the kind of service they are expected to provide. Transportation planners use functional classification to design a safe and efficient flow of traffic throughout the street network. The most basic categories are arterials, collectors, and residential streets.

### ➤ **ARTERIAL STREETS**

This system of streets serves the major centers of urban activity and supports the highest traffic volumes. Its purpose is to move people and goods efficiently and quickly, with the highest level of access control.

### ➤ **COLLECTOR STREETS**

These streets collect traffic from residential (local) roads and connect them with arterials. Compared to arterial streets, collectors provide a level of service at a lower speed for shorter distances, maintaining a balance between mobility and access.

### ➤ **RESIDENTIAL STREETS**

The great majority of streets in the network are meant to provide the most access to residences and other properties but with a lower level of mobility. These generally interconnect with each other and to collector streets.

## CURRENT PAVEMENT CONDITIONS

The City of Lacey currently maintains 184.9 centerline miles of asphalt pavement. The average PCI score for the entire street network is 84.6. The table below summarizes the lengths and PCI scores of the road network, as a whole and by functional class. The numbers in parenthesis represent the change from the previous report.

### Network Summary Statistics

|                     | Centerline Miles | Lane Miles      | Management Sections        | Network %       | PCI (weighted by area)       | RSL (weighted by area) |

<sup>1</sup>Hilmes Rd SE Right-of-way was confirmed outside of City Limits and thus removed from the network

96.8% of City of Lacey roadway centerline miles were rated as being in “good” or “very good” condition. Condition categories are relatively unchanged since last year.

Centerline Miles of Roadway per Condition Category

## NETWORK TRENDS

\*Increase in PCI due to software update and revised definition of weathering and raveling.

The network Pavement Condition Index (PCI) score is determined from a weighted average based on section area. Recent neighborhood development (new streets), along with a history of road improvement projects, have helped to slow down the rate of pavement deterioration over the entire network.

## Arterial & Collector Streets

## Residential Streets

One of the key goals of pavement preservation is to prevent “very good” or “good” pavement from deteriorating. For roads with PCI scores in the 50s and 60s that are left unmaintained, pavement deteriorates at an accelerated rate. Road treatments for “fair” or “poor” streets are much more expensive, as it is often necessary to repair structural damage or even rebuild the road. The “worst-first” approach to pavement management is costly, time consuming, and disrupts traffic flow for extended periods of time.

The concept of pavement preservation relates to extending a pavement’s service life by carefully choosing surface treatments while the pavement is still in good condition. Various strategies for roadway treatment include:

- **Routine Maintenance:**  
Scheduled, day-to-day activities (examples: crack sealing, repairing potholes, patches, maintaining channelization)
- **Preventive Maintenance:**  
Series of low-cost treatments intended to reduce the rate of road deterioration and preserve the existing road system (examples: seal coats, thin asphalt overlay)
- **Rehabilitation/Reconstruction:**  
Milling or removal of existing pavement, addressing subgrade problems, and constructing new asphalt structures

The success and cost-effectiveness of these treatments depend on choosing the optimal time to apply them, in order to get the greatest improvement possible for the lowest cost. By taking a proactive approach to maintaining our road network, we can provide the public with improved mobility and safer, smoother, longer-lasting pavements – and maximize the return on the City’s investment.

## Effect of Treatments

Example: cost per square yard for a residential road over 55 years

In the chart above, the red descending curves represent the “reactive” model of pavement treatment, in which roads deteriorate unchecked until they trigger major road rehabilitation. The blue curves illustrate the concept of pavement preservation, in which roads receive preventive maintenance regularly while still in good condition. Although prices for road treatments fluctuate and increase over time, the example serves to illustrate the obvious advantages to applying preventive maintenance.

Counting over the same period of time, the sum of the costs of preventive maintenance is substantially less than road reconstruction. This approach sustains a higher level of pavement performance and delays the need for rehabilitation. Benefits also include improved ride quality and safety, increased customer satisfaction, and reduced traffic congestion associated with major road repair.

## Elements of Pavement Preservation

| Treatment                           | Description                                                                                                                        | Expected Life of Treatment | Advantages                                                                                                                                                                                                                         | Disadvantages                                                                                                                                                                      |
|-------------------------------------|------------------------------------------------------------------------------------------------------------------------------------|----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Crack Seal                          | Localized treatment preventing water and debris from entering the road base and sub-base                                           | 3-5 years                  | <ul style="list-style-type: none"> <li>• Low cost</li> <li>• Common, widely used</li> <li>• Effective</li> </ul>                                                                                                                   | <ul style="list-style-type: none"> <li>• Short life span</li> <li>• Only addresses cracks</li> <li>• Possible reflective cracking later</li> </ul>                                 |
| Slurry Seal<br>or<br>Microsurfacing | Surface treatment of fine aggregate and asphalt emulsion. Makes a cold mixed material that cures quickly to a hard wearing surface | 5-8 years                  | <ul style="list-style-type: none"> <li>• Waterproofs and protects surface</li> <li>• Reduces pavement oxidation</li> <li>• Slows surface raveling</li> <li>• Adds surface friction</li> <li>• Improves ride and profile</li> </ul> | <ul style="list-style-type: none"> <li>• Cure time dependent on weather conditions</li> <li>• Success dependent on experienced contractor and proper mix of ingredients</li> </ul> |
| Chip Seal                           | Similar to slurry seal, with larger aggregate placed on top of asphalt binder                                                      | 7-10 years                 | <ul style="list-style-type: none"> <li>• Similar advantages as for slurry seals</li> <li>• More effective at sealing medium-severity cracking than other treatments</li> </ul>                                                     | <ul style="list-style-type: none"> <li>• Aggregate can become dislodged</li> <li>• Associated with increased road noise and rougher surface</li> </ul>                             |
| Cape Seal                           | Chip seal applied, with layer of slurry seal/microsurfacing on top                                                                 | 10-15 years                | <ul style="list-style-type: none"> <li>• Smoother ride than chip seal alone</li> <li>• Extended treatment life</li> <li>• Asphalt-like finish at lower cost</li> </ul>                                                             | <ul style="list-style-type: none"> <li>• More expensive than other seals</li> </ul>                                                                                                |
| Thin Hot-Mix Asphalt Overlay        | Thin layer (up to 1.25") applied to road surface                                                                                   | 10-12 years                | <ul style="list-style-type: none"> <li>• Works well in all climate conditions</li> <li>• Improves ride quality</li> <li>• Corrects surface irregularities</li> </ul>                                                               | <ul style="list-style-type: none"> <li>• Provides no additional structural capacity</li> <li>• Subject to delamination and reflective cracking</li> </ul>                          |

## BUDGET NEEDS CALCULATION -----

In order to run budget scenarios and ultimately develop an effective maintenance and rehabilitation strategy, the *StreetSaver* program first determines the maintenance “needs” of the roadway network. Because it costs less to maintain roads in good condition, *StreetSaver* calculates what it would take to improve the road system overall to an optimal PCI with no backlogged maintenance and then maintain it at that level (upper 80s/lower 90s). In this analysis a budget was calculated for ten years based on current treatment selections and unit costs, using an inflation factor of 3%. For each management section, the program projects the condition with and without treatment, recommends one or more treatments over the analysis period, and estimates treatment costs. The calculation tends to identify funding early for the poorer roads, so the estimated budget varies from year to year. Although greatly exceeding the City’s funding levels, the budget needs analysis represents an ideal funding strategy as calculated by *StreetSaver*.

The table below shows the level of expenditures, estimated at about \$56.4 million, that is needed to raise the City’s pavement condition to a network PCI average of around 90, and maintain that at a similar level while eliminating maintenance backlog. Of this amount, nearly \$15.5 million was designated for preventive maintenance (life-extending treatments), and about \$40.9 million for the more expensive rehabilitation and reconstruction treatments. The analysis also shows that if no road maintenance is applied over the next ten years, the overall PCI score will drop to 72 by 2034.

| Year          | PCI Treated | PCI Untreated | PM Cost              | Rehab Cost              | Cost                |
|---------------|-------------|---------------|----------------------|-------------------------|---------------------|
| 2025          | 90          | 85            | \$4,728,223          | \$10,963,601            | \$15,691,824        |
| 2026          | 88          | 84            | \$295,584            | \$1,299,763             | \$1,595,346         |
| 2027          | 88          | 82            | \$116,309            | \$3,071,147             | \$3,187,456         |
| 2028          | 87          | 81            | \$417,011            | \$1,171,381             | \$1,588,392         |
| 2029          | 87          | 80            | \$1,047,050          | \$2,065,320             | \$3,112,371         |
| 2030          | 86          | 78            | \$223,493            | \$3,255,522             | \$3,479,014         |
| 2031          | 86          | 77            | \$341,024            | \$6,200,997             | \$6,542,021         |
| 2032          | 85          | 75            | \$537,198            | \$1,528,809             | \$2,066,007         |
| 2033          | 88          | 74            | \$7,075,337          | \$9,647,770             | \$16,723,107        |
| 2034          | 87          | 72            | \$694,873            | \$1,711,228             | \$2,406,102         |
|               |             |               | <b>PM Total Cost</b> | <b>Rehab Total Cost</b> | <b>Total Cost</b>   |
| <b>% PM</b>   |             |               | <b>\$15,476,102</b>  | <b>\$40,915,537</b>     | <b>\$56,391,639</b> |
| <b>27.44%</b> |             |               |                      |                         |                     |

Once maintenance needs are established for the road network, we can run several “what-if” analyses to develop a cost-effective maintenance and rehabilitation strategy. The impact of various budget scenarios can be evaluated by projecting pavement condition values and deferred maintenance over a period of time, and make clear the advantages and disadvantages of different funding levels and maintenance strategies.

For each analysis a portion of the annual budget was allocated to preventive maintenance, such as crack and surface seals. As was the case with the budget needs module, the scenarios take into account current unit costs with inflation and treatment options. Each scenario also forecasts a cost for deferred maintenance based on projected PCI scores. Deferred maintenance refers to pavement rehabilitation that is needed but cannot be performed due to budget limitations. Putting off needed street repairs allows pavement quality to gradually decrease, but it also makes those treatments much more expensive later on, as those street sections fall into the “fair” and “poor” categories. Once deemed in need of reconstruction, the software no longer considers a section for preventive maintenance. Deferred maintenance values relay a general trend and are prone to vary depending on actual maintenance done.

➤ **Scenario 1: Unfunded (No Budget)**

The first scenario predicts the impact on pavement condition if no funding is put toward roadway projects for the next ten years. The network PCI value is estimated to drop from 84.6 to 72.

➤ **Scenario 2: \$3.5 Million Annual Budget**

The City of Lacey formed a Transportation Benefit District (TBD) and proposed a 0.2% increase in sales tax in order to fund street maintenance. In July of 2017, the City began collecting revenues generated by this measure. Based on early returns, the annual income is estimated at \$3.5 million through the year 2034 (assuming the TBD fund passes a vote after the current 2027 expiration). The PCI drops to 83 over the duration of the ten-year analysis period.

➤ **Scenario 3: Maintain Current PCI (\$4.0 million/year)**

In this target-driven scenario, *StreetSaver* estimated what it would cost to sustain the current PCI of 84.4 during a ten-year period. The total cost came to about \$40.0 million, an average of roughly \$4.0 million each year.

➤ **Scenario 4: Unconstrained Budget (Approx. \$5.4 million/year)**

The “budget needs” study (see page 17) calculated that it would take \$56.4 million to immediately raise the network pavement condition to an ideal level and sustain that level for nine additional years. The amount per year varied depending on the maintenance backlog, but equated to roughly \$5.4 million annually. The PCI score would increase from 84.6 to 87 in the 10-year period.

### Scenario 1: Unfunded (No Budget)

In the first scenario, no funds are set aside for pavement preservation. The network PCI is estimated to decrease to 72 from the current value of 84.6. By the year 2034, only 13.7% of streets would land in the “very good” category, and categories “fair” and “poor” would make up 13.9% of all streets. Deferred maintenance is estimated to increase to nearly \$46.8 million.

#### Summary from Scenario 1: Unfunded

| Year | PCI | Deferred Maintenance |
|------|-----|----------------------|
| 2025 | 85  | \$15,691,824         |
| 2034 | 72  | \$46,830,928         |

**Scenario 2: \$3.5 Million Annual Budget**

This scenario shows the effects of an annual \$3.5 million budget strategy toward the City’s roadway network, beginning in 2025 and ending in 2034. The overall PCI score would steadily decrease from 84.6 to 83 by 2034. The cost of deferred maintenance would slightly increase from \$15.7 million in 2025 to \$17.1 million in 2034. At this investment level, in ten years’ time 1.3% of the network would be in the “fair” category or “poor” category with 98.7% of the network being categorized as “good” or “very good”.

**Summary from Scenario 2:  
\$3.5 Million Annual Budget**

| Year | PCI | Deferred Maintenance |
|------|-----|----------------------|
| 2022 | 85  | \$15,691,824         |
| 2031 | 83  | \$17,093,093         |

### Scenario 3: Maintain Current PCI

This scenario shows what it would take to maintain the current PCI of 83.3 over a ten-year period. The *StreetSaver* program calculates an amount of \$4.0 million per year to reach this goal. The cost of deferred maintenance would increase slightly from \$16.1 million to \$17.9 million. 97.4% of the network would be classified as “good” or “very good” under this investment schedule. The difference in percentages Streetsaver maintained in the “very good” category was 16.0% (62.3% versus 46.3%) in this scenario compared to Scenario 2. 0.4% of the network would fall under the Poor category.

#### Summary from Scenario 3: Maintain Current PCI

| Year | PCI | Deferred Maintenance |
|------|-----|----------------------|
| 2025 | 85  | \$15.449,157         |
| 2034 | 84  | \$11,347,462         |

### Scenario 4: Unconstrained Budget

In this scenario, an unconstrained amount is applied in 2025 to bring the network PCI to the Budget Needs condition of approximately 90. Each successive year, an amount is placed towards preventative maintenance based on demand of the StreetSaver algorithm. Approximately \$56.4 million would be spent over the 10 year period averaging to roughly \$5.6 million annually. By the year 2034, 71.9% of the network would be in the “very good” category and the remaining 28.1% lie in the “good” category. Deferred maintenance would be eliminated in this scenario based on each road being constantly maintained to stay above the StreetSaver threshold for reconstruction in the 10 year window and the unconstrained budget able to exceed the yearly recommendations for preventative maintenance and rehabilitation.

#### Summary from Scenario 4: Unconstrained Budget

| Year | PCI | Deferred Maintenance |
|------|-----|----------------------|
| 2025 | 90  | \$242,667            |
| 2034 | 87  | \$0                  |

### **Golf Club Road Water & Wastewater Improvements**

The Golf Club Road Project was a utility funded project which improved the underground utilities along the roadway as well as provided the road with a reconstructed surface of fiber reinforced HMA.

- Reconstruction of 1.76 lane miles of Golf Club Rd SE with 4" of fiber reinforced HMA south of 21<sup>st</sup> Ave & " of fiber reinforced HMA north of 21<sup>st</sup> Ave. Previous PCI scores of 43 to 84.
- Grind and Overlay of the Golf club & Pacific Ave Roundabout with 2.5" of fiber reinforced HMA. Previous PCI score of 73.
- Reconstruction of 0.44 lane miles of Lacey Blvd SE with 6" of fiber reinforced HMA. Previous PCI score of 54.

#### **Poor Existing Conditions**

Golf Club Rd SE  
Paving Operation

### **Pacific & Homann RAB Improvements & Sharrow Route Striping**

The Pacific & Homann Project composed of the Pacific and Homann Roundabout and the abutting section of Homann Dr to 13<sup>th</sup> Ave. There was a missing link of sidewalk that was also added with the project. The project was mostly funded through TBD but utilized other funding for the additional work relating to the bike striping and sidewalk.

- Reconstruction of 0.26 lane miles of Homann Dr south of the Roundabout with 3" fiber reinforced HMA. The previous PCI score of 51 was not brought up to a 100 due to the section being part of a larger section with elevated distresses.
- Grind and Overlay of the Homann Dr & Pacific Ave Roundabout with 2.5" of fiber reinforced HMA. Previous PCI score of 72.

### **Pacific & Homann Roundabout**

## Yelm Highway Rehabilitation

The Yelm Highway Rehabilitation project was designed and constructed using TBD funds. The project comprised of the following improvements.

- Strategically reconstructed 2.33 lane miles of Yelm Highway from Ruddell Rd Se to Balustrade Blvd utilizing asphalt treated base material. The Roadway surface was a 5" fiber reinforced HMA section over the aforementioned base material. Previous PCI scores of 73 to 77.
- A 2.5" grind and overlay was performed on the sections that were not exhibiting signs of base failure.

### ***8<sup>th</sup> Avenue Rehabilitation***

---

8<sup>th</sup> Avenue, leading into the shopping center off Sleater-Kinney Rd, was one of the worst rated roads in the city network. With a PCI of 16, the roadway was failed with extensive high levels of distresses. The roadway was becoming a maintenance issue and in dire need of repair.

- Reconstruction of 0.23 lane miles of 8<sup>th</sup> Avenue SE with 3.5" of HMA and enhanced the drainage capability of the roadway to reduce recurrent ponding.. Previous PCI score of 16.

Finished Section

### College Street Extension NE

---

The College Street Extension NE was a jointly funded project between the TBD and the city's arterial streets fund. The project comprised of the following improvements to roadway sections.

- Reconstruction of 1.83 Lane miles of College St NE and the addition of an additional link connecting to 15<sup>th</sup> Ave NE to the north. The extension will be constructed after the publication of this report. All sections were constructed with 6" fiber reinforced HMA. Previous PCI scores of 50 to 58.
- Reconstruction of 0.97 Lane miles of 6<sup>th</sup> Ave NE From College St NE to Sleater-Kinney Rd NE with 6" fiber reinforced HMA. Previous PCI scores of 49 to 52.

## ***2023 Crack Seal Program***

---

The 2023 Crack Seal Program was a joint program between City staff and contracted work to provide crack seal to roadways in need of treatment. The work carried over into 2024. See the list provided below for locations.

- Contract Crack Seal (In 2024)
  - Cameron Dr NE (Campus Highlands Dr – Campus Park Dr)
  - 3<sup>rd</sup> Ave SE (City Limits – Marvin Rd)
  - 6<sup>th</sup> Ave SE (Sleater Kinney Rd– College St)
  - Pacific Ave SE (4207 Pacific – Golf Club Roundabout)
  - Clearbrook Dr SE (Lacey Blvd – Pacific Ave)
  - Carpenter Rd SE (Woodland Trail – 7<sup>th</sup> Ave)
  - 25<sup>th</sup> Ave SE (Ruddell Rd – Hicks Lake Rd)
  - The Arbors Neighborhood (North of 41<sup>st</sup> Ave)
  - Corporate Ctr Ct & Lp (Entire Limit)
  - 53<sup>rd</sup> Ave SE (College St – Parkside Roundabout)
  - Parkside Dr SE (53<sup>rd</sup> Roundabout – Yelm Hwy)
  - Rainier Rd SE (66<sup>th</sup> Ave – Yelm Hwy)
  - Balustrade Blvd SE (Rainier Rd – Yelm Hwy)
  - Ruddell Rd SE (66<sup>th</sup> Ave – Yelm Hwy)
  - 70<sup>th</sup> Way SE (Rainier Rd – Radius Lp)

# PAVEMENT CONDITION INDEX SCORES -----

**Pavement Condition Index (PCI):**  
A value between 0 and 100 which is used to indicate the general condition of a pavement. This table shows PCI scores from the past five years for each road segment.

**Remaining Service Life (RSL):**  
The estimated number of years to the time when the pavement is providing substandard service quality.

The *Pavement Surface Condition Field Rating Manual for Asphalt Pavement* is the guide used to determine pavement defects and the severity of those defects. Written by the Northwest Pavement Management Association (NWPMA) and the Washington State Department of Transportation (WSDOT), the rating manual defines fourteen different types of defects with three levels of severity.

In Lacey's pavement management system, information is collected for the following defects:

- Rutting & Wear
- Alligator Cracking
- Longitudinal & Transverse Cracking
- Raveling & Weathering
- Patching
- Depressions & Distortions

### ***Rutting & Wear***

*Rutting* is a surface depression within the wheel path may be caused by heavy trucks, slow or stopping traffic, poor construction or moisture damage. When the upper pavement layers are rutted, the pavement along the edges of the rutted area may lift up.

*Wear* is surface depression in the wheel path resulting from tire abrasion.

#### **Rating Severity:**

In both cases, the overall severity is measured by the average observed depth of the rut, or wear depression.

|        |                      |
|--------|----------------------|
| Low    | 1/4 inch to 1/2 inch |
| Medium | 1/2 inch to 3/4 inch |
| High   | over 3/4 inch        |

## ***Alligator Cracking***

---

*Alligator Cracking* is associated with loads and is usually limited to areas of repeated traffic loading. Generally, cracking of this type begins as a single longitudinal, discontinuous crack within the wheel path that progresses with time and loads to a more branched pattern that begin to interconnect. Eventually the cracks interconnect sufficiently to form many pieces, resembling the pattern of alligator hide.

Potholes and other occurrences of missing or destroyed pavement eventually accumulate as crack severity worsens.

### **Rating Severity:**

|        |                                                                                                                                                                  |
|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Low    | Branched, discontinuous thin cracks are beginning to interconnect and form the typical alligator pattern.                                                        |
| Medium | Cracking is interconnected and forms an alligator pattern. The cracks are wider with some spalling* along the edges, but the pavement pieces are still in place. |
| High   | The alligator pattern is fully developed. Individual pieces of pavement may be loosened or even missing. Pumping* up through the cracks may be seen.             |

\* See Glossary (pages 120-121)

## ***Longitudinal & Transverse Cracking***

---

*Longitudinal Cracks* run roughly parallel to the roadway center line. Longitudinal cracks associated with the beginning of alligator cracking are generally discontinuous and broken. They may be associated with loads, poorly constructed paving joints, or joints and cracks under the surface course.

*Transverse Cracks* run roughly perpendicular to the roadway center line. They may be due to surface shrinkage caused by low temperatures, hardening of the asphalt, or cracks in underlying pavement layers.

### **Rating Severity:**

- |        |                                                                                                                      |
|--------|----------------------------------------------------------------------------------------------------------------------|
| Low    | The cracks have very little or no spalling along the edges and are less than 1/4 inch wide ("hairline" cracks).      |
| Medium | Cracking is 1/4 inch wide or greater. There may be a few thin connecting or intersecting cracks near the main crack. |
| High   | Cracks are spalled and wide. Pieces are visibly missing along the crack.                                             |

## ***Weathering***

---

*Weathering* is the wearing away of the asphalt binder and fine aggregate. Pavement surface deterioration occurs due to oxidation, inadequate compaction, insufficient asphalt content, excessive natural sand, surface water erosion, and traffic. The pavement loses its smooth surface and begins to appear open and rough like very coarse sandpaper.

### **Rating Severity:**

- |        |                                                                                                                                                                                                   |
|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Low    | The asphalt surface is beginning to show signs of aging. The binder or fine aggregate is starting to wear away and may be accompanied by fading of the asphalt color.                             |
| Medium | The loss of fine aggregate is noticeable and the edges of the coarse aggregate are exposed up to 1/4 width (of the longest side). The surface texture is moderately rough and pitted.             |
| High   | There is considerable loss of fine aggregate and the edges of the coarse aggregate are exposed greater than 1/4 width (of the longest side). The surface texture is very rough and deeply pitted. |

## ***Raveling***

---

*Raveling* is the dislodging of coarse aggregate and it is caused by insufficient asphalt binder, poor mixture quality, inadequate compaction, segregation, or stripping. The pavement surface is rough and appears dimpled and pitted.

### **Rating Severity:**

- |        |                                                                                                    |
|--------|----------------------------------------------------------------------------------------------------|
| Medium | The loss of coarse aggregate is considerable (greater than 20 pieces or clusters per square yard). |
| High   | The surface texture is very rough and pitted and may be completely removed in places.              |

## ***Patching***

---

A patch is an area of pavement which has been replaced with new material to repair the existing pavement or access utilities. Though they are a necessary part of repair work, patched areas generally don't perform as well as the original pavement section.

In general, patches are smaller than typical rehabilitation in size and scope. They are less than full roadway width and/or are less than project length. For each treatment it must be determined whether it would be more effective (and cost-effective) to apply patches throughout as needed, or to simply reconstruct the road.

### **Rating Severity:**

- |        |                                                      |
|--------|------------------------------------------------------|
| Low    | Patch has at most low severity distress of any type. |
| Medium | Patch has medium severity distress of any type.      |
| High   | Patch has high severity distress of any type.        |

## Depressions & Distortions

---

These defects are localized low spots or elevated areas of the pavement that result from settlement, pavement shoving, displacement due to subgrade swelling, or displacement due to tree roots. These forms of surface distress occur in isolated areas of the road.

### Rating Severity:

The severity is defined by as the maximum vertical deviation from a 10-foot straightedge placed on the pavement:

- |        |                                   |
|--------|-----------------------------------|
| Low    | 1/8 inch to 2 inches per 10 feet. |
| Medium | 2 inches to 4 inches per 10 feet. |
| High   | Over 4 inches per 10 feet.        |

## GLOSSARY OF COMMON TERMS

|                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Arterial</b>                  | High-volume roadway intended for efficient movement of people and goods.                                                                                                                                                                                                                                                                                                                                                              |
| <b>Collector</b>                 | Roadway that connects commercial, industrial and residential streets to arterials or other collectors.                                                                                                                                                                                                                                                                                                                                |
| <b>Distresses/<br/>Defects</b>   | Visual pavement surface distress or pavement defects can be quantified and related to the life cycle of a given type of pavement or roadway under given traffic and weather conditions. Each distress is generally associated with a specific pavement property, such as aging, wearing, fatigue, or materials. These pavement surface defects can be distinguished and quantified visually by human or automated techniques.         |
| <b>Extent</b>                    | Extent is the measure of area, length, or count associated with a given distress. It is how much and how far a given defect has progressed.                                                                                                                                                                                                                                                                                           |
| <b>HMA</b>                       | <u>Hot Mix Asphalt</u> . The most common type of flexible pavement surfacing in the U.S.                                                                                                                                                                                                                                                                                                                                              |
| <b>PCI</b>                       | <u>Pavement Condition Index</u> . A value from 0 to 100 assigned to a given road section, calculated by deducting points for the extent and severity of noted defects. Serves as a comparative indicator of pavement condition.                                                                                                                                                                                                       |
| <b>PMS</b>                       | <u>Pavement Management System</u> . "A systematic method for routinely collecting, storing, and retrieving the kind of decision-making information needed [about pavements] to make maximum use of limited maintenance [and construction] dollars." - The American Public Works Association (APWA)                                                                                                                                    |
| <b>Pavement<br/>Preservation</b> | "The timely application of carefully selected surface treatments to maintain or extend a pavement's effective service life."                                                                                                                                                                                                                                                                                                          |
| <b>Project</b>                   | A project is the unit used to evaluate or group pavement elements. Projects are generally thought of as portions of roadway that could reasonably become funded improvement projects; however, they can be grouped together for various reasons. They generally consist of similar geometric data, such as pavement width, structure, and pavement type, or can be related to other needs, such as traffic volumes or planning needs. |

|                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Pumping</b>    | The forcing of base materials up through the cracks in the pavement by water.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Raveling</b>   | The loss of material from the pavement. This may involve only small amounts of fine aggregate and/or binder; or it may involve large pieces of the pavement at the edge of cracks or joints.                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>RSL</b>        | The <u>Remaining Service Life</u> of a pavement is the estimated number of years to the time when the pavement is providing substandard service quality. This value is calculated using the distress data and the pavement's rate of deterioration.                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Severity</b>   | The definition of severity for a given defect varies with each distress and is generally a measure of how badly or to what extent a given defect has deteriorated. Examples are crack widths, crack deterioration, or spalling, and loss of materials.                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Spalling</b>   | The deterioration of the sharp edge formed at the pavement surface along each side of a crack or joint. With severe spalling, pieces of the pavement break away, causing the visual size or width of the crack on the pavement surface to be irregular and wider than the crack width below the surface. Large spalls may extend to full depth.                                                                                                                                                                                                                                                                                               |
| <b>Segment</b>    | <p>A segment is generally a single block, 1/10th mile, or other relatively short, homogeneous unit of roadway. Several segments may be included in a single project. Smaller segment definitions provide greater flexibility in the growth and expansion of the pavement management system.</p> <p>These are generally the fundamental elements of the roadway network and thus the PMS database structure. All ratings are performed within each segment. All data within the PMS are linked or referenced to a given segment, and they are located in the segment or roadway by the distance or mile post along a given street or road.</p> |
| <b>Wheel Path</b> | There are two wheel paths per traffic lane. If the lane is equally divided longitudinally down the middle, each half may be broadly considered one wheel path. Therefore, a two-lane roadway has four wheel paths.                                                                                                                                                                                                                                                                                                                                                                                                                            |

## STAFF REPORT

Council Worksession  
March 10, 2026

**Subject:** Transportation Benefit District Renewal  
**To:** Lacey City Council  
**Prepared by:** Aubrey Collier  
**Department Director:** Scott Egger, Public Works Director *SE*  
**Reviewed By:** Not Applicable  
**Final Review:** Rick Walk, City Manager

**Purpose:** Briefing *RW*

**Recommendation:** Review only.

**Brief:** The Transportation Benefit District (TBD) will expire in February 2027. This presentation is to provide a briefing on the need for the TBD, and discuss options for funding beyond this date.

### Background:

A Transportation Benefit District (TBD) is a funding tool authorized by the Revised Code of Washington (RCW) that can be utilized by local governments to help fund transportation improvements.

City's historically have been challenged with funding transportation maintenance due to limited funding tools (compared to utilities which have dedicated funding sources). Counties have a dedicated road tax. Transportation maintenance is funded through a portion of the gas tax. Additionally, it competes for general fund revenue with all general fund services.

The 2025 State of the Streets pavement analysis results show that the City needs approximately \$4 million/year to maintain the current pavement rating. This need will continue to grow as new streets are built, and as areas are annexed in to the City. Additional funding is also needed for the annual sidewalk replacement program. The City has approximately 18,000 sidewalk offsets or damaged sidewalks in need of repair. Over the last 4 years, the City has been setting aside approximately \$500k of TBD money for sidewalk repairs. This brings the total capital maintenance funding need to approximately \$4.5 Million/year.

The City of Lacey Transportation Benefit District is funded by a .02% sales tax that was approved by a vote by the public in February 2017. This tax expires after 10 years in February of 2027. The 3-year average for the TBD sales tax revenue is approximately \$3.8M.

This presentation will provide background information. This presentation will also provide discussion topics that staff need additional guidance on, such as funding options, election schedule, and ballot language.
